With **LEGO Mindstorms**, building and programming your own EV3 robot has never been easier. Follow directions to build the base robot and let your imagination fly. Use the motors and sensors to add behavior and movement. The Mindstorm software will guide you to program your robot to life!

We will be having a **FITNESS CLUB** on Tuesdays from 3:15 - 4:15. Meet in room 225 and we will be moving to our fitness location! What a great way to de-stress...while getting healthy! This is for staff and students.

## CHECK OUT OUR INCENTIVES

Every two weeks our students, with 95% attendance and good behavior, participate in **incentive days**. On October 1st, students had the choice on playing kickball in the gym, working in the art room, or attending a movie in the auditorium. **All the students had a wonderful and relaxing time!**

## WHAT'S GOING ON IN CARPENTRY?

Students are learning about shop safety as well as the various wood working tools they will use this year. Students have the opportunity to use these tools and learn by doing!

Be sure to check out the carpentry club that will be held on Thursday Afternoons! Students will be working on building a small speaker box to amplify the sound from a wireless speaker. Additional projects will include adding features to existing projects like the cell phone stands and cutting boards.

The students will be able to create and install inlays and other special features to their cell phone stands and gutters and handles to their cutting boards.

## AROUND THE WORLD IN MS. HERCOLLINI'S ROOM

Students worked on identifying their families' places of origin.
